

EE 522 - PsiQuantum Group - Weekly Report 7

Kush Aggarwal
Thomas Huang
Christopher Sharp

Previous Meeting Items

We are finishing common benchmarking tools ahead of the midterm report to have plots for the existing algorithms and choosing new algorithms to implement. We discussed soft deadlines for finishing up ahead of the poster session though it was clarified that the results don't have to be set in stone or crystallized ahead of the final report.

Future Plan

We have about two weeks to implement these second algorithms and get initial plots. We would like to improve the plots, in particular to get several algorithms on the same plot (including algorithms previously implemented in Workbench) for visual comparison and reference. Mariia wants us to finalize poster contents with us next Monday's meeting since the Monday after that is a holiday (we may reschedule but TBD) so we'll need to get that nailed down. We have access to old posters presented at ENGINE but none quite like our project; however it should hopefully be straightforward to generalize our paper results to a poster format. Most of the content decisions will probably be around presentation choices.

Problems

Complexity of multiplication algorithms vs addition algorithms is rearing its head, causing delays in second algorithm implementation. Workbench is hosted on AWS, and there was an AWS outage end of last week Thursday and Friday, so there were delays in writing code and obtaining benchmark plots induced by that.
